EXERCICI 3

SERVIDOR WEB

Fet per Victor Alvarez Calvo 2n SMX B1
M07-UF3-ServidorWeb-Activitat3
Professor: Oscar López

1-Primer configurarem el netplan

```
  GNU nano 7.2                    /etc/netplan/50-cloud-init.yaml
# This file is generated from information provided by the datasource.  Changes
# to it will not persist across an instance reboot.  To disable cloud-init's
# network configuration capabilities, write a file
# /etc/cloud/cloud.cfg.d/99-disable-network-config.cfg with the following:
# network: {config: disabled}
network:
 ethernets:
   enp0s3:
     dhcp4: no
     addresses:
       - 172.16.23.206/24
 version: 2
```

2- Despres instal·larem el apache fent = sudo apt install apache2

```
user@vm-server:~$ sudo apt install apache2
S'està llegint la llista de paquets… Fet
S'està construint l'arbre de dependències… Fet
S'està llegint la informació de l'estat… Fet
S'instal·laran els següents paquets extres:
  apache2-bin apache2-data apache2-utils libapr1t64 libaprutil1-dbd-sqlite3 libaprutil1-ldap
  libaprutil1t64 liblua5.4-0 ssl-cert
Paquets suggerits:
  apache2-doc apache2-suexec-pristine | apache2-suexec-custom www-browser
S'instal·laran els paquets NOUS següents:
  apache2 apache2-bin apache2-data apache2-utils libapr1t64 libaprutil1-dbd-sqlite3
  libaprutil1-ldap libaprutil1t64 liblua5.4-0 ssl-cert
0 actualitzats, 10 nous a instal·lar, 0 a suprimir i 0 no actualitzats.
S'ha d'obtenir 2.084 kB d'arxius.
Després d'aquesta operació s'utilitzaran 8.094 kB d'espai en disc addicional.
Voleu continuar? [S/n]
```

```
user@vm-server: /etc/apache2
user@vm-server:~$ cd /etc/apache2/
user@vm-server:/etc/apache2$
```

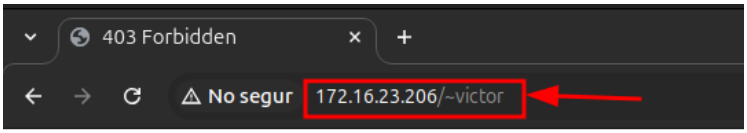

3- Fes que tots els usuaris tinguin un espai web de forma automàtica. Fes que en crear un usuari això funcioni automàticament

```
user@vm-server:/etc/apache2$ sudo mkdir /etc/skel/public_html
[sudo] password for user:
user@vm-server:/etc/apache2$
```

```
  GNU nano 7.2                    /etc/skel/public_html/index.html
AQUEST ES EL EXERCICI NUMERO 3 DE SERVIDOR WEB
```

```
user@vm-server:/etc/apache2$ sudo a2enmod userdir
Enabling module userdir.
To activate the new configuration, you need to run:
  systemctl restart apache2
user@vm-server:/etc/apache2$ sudo systemctl restart apache2
user@vm-server:/etc/apache2$
```

```
user@vm-server:/etc/apache2$ sudo adduser victor
info: Adding user `victor' ...
info: Selecting UID/GID from range 1000 to 59999 ...
info: Adding new group `victor' (1001) ...
info: Adding new user `victor' (1001) with group `victor (1001)' ...
info: Creating home directory `/home/victor' ...
info: Copying files from `/etc/skel' ...
New password:
Retype new password:
passwd: password updated successfully
Changing the user information for victor
Enter the new value, or press ENTER for the default
        Full Name []:
        Room Number []:
        Work Phone []:
        Home Phone []:
        Other []:
Is the information correct? [Y/n]
info: Adding new user `victor' to supplemental / extra groups `users' ...
info: Adding user `victor' to group `users' ...
user@vm-server:/etc/apache2$
```

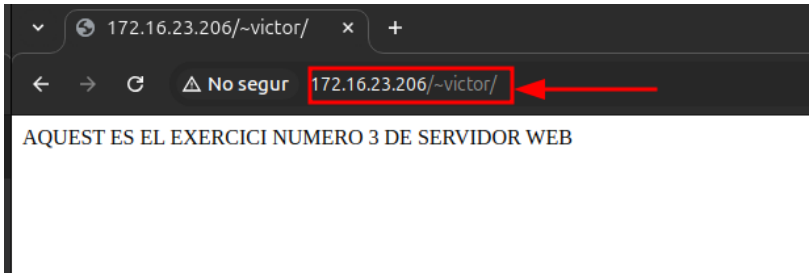

Forbidden

You don't have permission to access this resource.

Apache/2.4.58 (Ubuntu) Server at 172.16.23.206 Port 80

```
user@vm-server:/etc/apache2$ sudo ls -l /home/victor/
total 4
drwxr-xr-x 2 victor victor 4096 de gen.  22 13:18 public_html
user@vm-server:/etc/apache2$ sudo chown :www-data -R /home/victor/
user@vm-server:/etc/apache2$ sudo ls -l /home/victor/
total 4
drwxr-xr-x 2 victor www-data 4096 de gen.  22 13:18 public_html
user@vm-server:/etc/apache2$
```

```
root@vm-server:/home/victor/public_html# mv index.html hola.html
root@vm-server:/home/victor/public_html# ls
hola.html
```

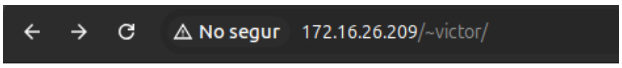

4- Desactiva que es pugui veure el directori si no hi ha index

```
 GNU nano 7.2                 /etc/apache2/mods-available/userdir.conf
UserDir public_html
UserDir disabled root

<Directory /home/*/public_html>
        AllowOverride FileInfo AuthConfig Limit Indexes
        Options MultiViews Indexes SymLinksIfOwnerMatch IncludesNoExec
        Options -Indexes
        Require method GET POST OPTIONS
</Directory>
```

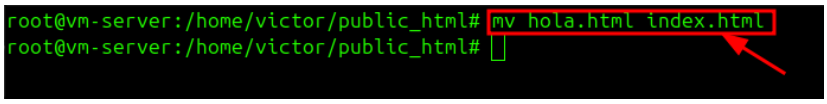

```
user@vm-server:~$ sudo systemctl reload apache2.service
user@vm-server:~$
```
